

218

One Microbe of this Prana air is the most shranked level of space. This level is marked out in 10 centigrades.

Above this level is the **Plenty of Prana**

In this level there is no necessity to call that portion as Plenty of for one Microbe of that has enormous.

From this Prana level – from None, not, Nil worked a Prolong.

10-40 p.m.

Wools air –

Last level in Prana grade.

Ten Centigrades marking in it = 10,000

Microbe

Hadons

Best spoonds

6-55 p.m.

Sep 23" 21. Fr.

View taken grades

By the Self – view the Stability goes to the Prana levels.

First it penetrates in the Microbe shranked level, in order to reach its ending level to act downwards from that.

So the stability bores the 10 divisions of the Centigrade.

By the views action the Microbe's prolong grade is retorted and the whole spread up of the Cosmos was shaken.

So with the 3 sides shaken state of Etheric begins to bore the 4" side i.e. in the Prana levels.

7-15 p.m.

The boring to the 4" side i.e. one Microbe's dot is a great shaking to the **Self figure would be equal to dead occurrence.**

Since yesterday (22-9-21) from Comet tyre to Stability of the Self in Prana level a connection is established and began

219

to throw the Microbes from that level to the Comet tyre in order to act in this field.

By this 4 sides Prana level is established and a flow comes as 5" in spots from Plenty of Prana in a tube flow.

This flow line from the microbe is going to work 60 per second.

7-45 p.m.

In this line the Etheric of C.V. is going to high Microbe level and down to Comet tyre. Then to her physical system will be in working up to 25" inst.

After testing it the self system working will be taken.

Then further advice will be given.

1. Prana Level
2. Starting
3. T level i.e. gh stanges marking
4. A. turn
5. Kundalini – Retortion
6. Further Prolong
7. T. prolong in airy form.
- 8.

5-20 p.m.

Sep 25" 21. Sund.

"Through Connection"

Before giving further explanation some facts should be revealed of the practice given to Self system.

Take Chandu figure.

In the gaseous house the figure stands is to take as a pure Memory form, above the Memorandum house.

As this figure having higher and lower experiences why the Self births could not have to act the same.

This view came and went in running through the Memoran-

220

dum to the ending house, from the very first starting up to Past birth and the view was given to the Conscience.

Then went in rotation of births and came to last house and

6-5 p.m.

before going to begin another rotation it wants to impart the view to the figure.

So in the last birth of that house this view was given to the physical form.

So there was no opportunity to show it to outer as it was in filling work.

In this House:

1. To be as gaseous figure.
2. Spreading the view.
3. Throwing to the outer.

For 3 it took 40 years.

While it is filling up the body, from the 15" year it began to drag each house Stability in order to inject the views, and has worked 11 stabilities & one is remaining.

7-15 p.m.

To the 8" stability it injected the view, while it came to the Self quill house, to penetrate the Self system.

There it was also made to know to throw the view to the outer and works the Memorandum to act as per view.

Now to the Self 7 stabilities leading and the 8"

1. Stability - While filling the K. reached.
2. do - at K. bottom, end by covering it on 2 sides
3. do - from bottom a quill to

221

Left side.

4. do - quill on right side

7-40 p.m.

5. do - Between inhaling and exhaling i.e. above Venkatram
6. do - Went in vapour
7. do - at the diaphragm with view to work the Memorandum and not to go away in vapour, and gave 2 houses speed to it, This has caused it to drag the Memorandum of its. Hence the death of the Mother to it.
8. do There was no space to try Within the a of space the 40" year reached.

8 p.m

Then the 8" from the Self Stability at the Complete pervasion of the view in the system it penetrates C.Venca.

This works keeping the House working in outer and with the Self Stability view to mould a Memorandum. So the speed worked here from the Self view within the Stability Centre and by its greater speed while C.V. is receiving, the view is pervaded in her system & fills up.

To pervade the whole system it took one year.

With first wife Stability and the 2" C.V.'s it comes to 10 Stabilities, 11" is Sundaram. The Stability that went in Vapour without Memorandum was fixed

8-30 p.m.

to him to act as Lu Centre to work as per view, to try it whether it acts on a form of no relation.

8-35 p.m.

9-50 p.m.

It acted to work the view in outer at 40" year by the Self View's pressure acted on Venca in outer and the pressure for moulding received by her when joined it caused her Etheric to rise from her body.

Now this Etheric goes out with view's pressure only covered.

Chandu Memorandum work came to an end.

The view thinks why this should go to shrink which is moulded by itself and begins to trace its cause.

By view's experience it came to

10" p.m.

know that it is due to the want of Prana

Then it vibrates it to physical conscience to throw as sound, to act in outer.

This made to treat the child.

First day it acted in one degree.

Then a shrinking is shown C.V. observes the treatment in her giddiness state.

Second day during affect S.S. by the New Stability observes the working.

Third day Self & S.S. jointly treated.

S.S. treats the Child by mentioning each organ of the body to work in

10-20 p.m.

proper order. This acted in his own system and by the view's pressure to fill up Prana is also acts on the child.

C.V. by the Plenty of Prana sound she had touch with Chandu stability in Kanya house and goes to Meena quill.

There she had touch with gaseous figure view and goes to

higher and causes the New Stability to enter the high levels to work in treatment line and for practising instructions.

7-20 p.m.

Sep 28" 21.W.

The word 'Supply' was given by the self gaseous figure by view that was deposit in it to C.V.'s Etheric to repeat it to New Stability.

As this figure gives Prana work to the House from this level to go to births it acted in the Self system to go to next birth as per Self view so it takes this opportunity to separate the Stability with Memory from the physical system for its mission.

Since the beginning of the human form the view was waiting for this opportunity to act, only after the sound is thrown as Supply.

Then it began to separate and reached the Prolong end to bore the Prana level.

7-50 p.m. 'about the Prolong'

From the Starting to finer levels as None, Nil, O reached is one.

From that again came to the same space and after reaching the levels of None, Nil, O and from that a 'starting' began.

So a Microbe undergoing the above and came to a state is the energy that swelled is the consolation energy of Swan.

Prana converted into finer state itself is the Consolation i.e. one Microbe knowing itself.

Swan means only Pure self known Swan swelling is the None, Nil, O worked to finer becomes an energy without Swan state.

8-20 p.m.

That state is an 'Hidden' form

1. Consolation to become as Swan is one discouragement
2. Swan state is one encouragement
3. That came to very finer & finer energy is a space and that

space returned with the energy.

This level itself becomes to a cause for starting.

This space is the cause for to act as energy.

So this becomes to act as Swan worked as in first.

This space stands as a separate grade which has no Connection to high or lower to start an Energy.

8-40 p.m.

Where a level comes as no space and no energy forms a level to show energy in lower level.

This level is to take as 'Nothing'.

In the Swan state it has become as Nothing That came to as 'Shain'.

As it has made 'Nothing', it makes as "Shain".

As soon as it becomes as Shain it has the quality to show energy level.

After this one portion of it was made to show energy.

While it is swelling one portion at lower part the shain energy was shown.

This was retorted as a reflexion as a 'Pan'.

9-20 p.m.

This Pan or Energy Pan swells as separated from shain and stands in the Shain level.

From this Pan level it begins to show swelling by absorbing the energy and reflects a Pan without energy and separates it without any touch to it as Nothing but shains Pan - as empty Pan.

On any account it will not show any kind of energy – 'Nothing Pan'

In this Energy less pan begins to swell energy less shain

state in a point and separates it.

This comes to 'But' i.e. from 'Nothing', 'but' ಅಯಿತ್ತೆ

1. From Energy reflexion – Nothing but,
2. But
3. Senka Air
4. Senka air space
5. Senka border
6. Tubes
7. Tubes air Laddus

9-40 p.m.

'But' when begins to swell the shain state, an energy less 'shain' swelling comes.

This an energy less shain swelled from But.

As it is not in Pan limit and has swelled it has no Shain, Pan grade or Energy grade, it comes to the level of 'Senka air'.

This begins to tube work to its limit.

'Senka'

From this to the bottom reached it twice the part of Microcrews

This tries to find out is there any energy in two branches.

10" p.m.

This goes to swell and it is called "Laddus".

This to take as "Consolation" follow. In this Laddus ending level that went in first and a point in it a conception comes as energy and at once it separates it from the "Laddus".

That separated one becomes as "Saw-Dalls".

There are two conceptions:

1. There must be one Swan Pus

2. There is, - but not seen – Saw Dolls

7-10 p.m.

The air that comes out from the tube is 'Laddus'.

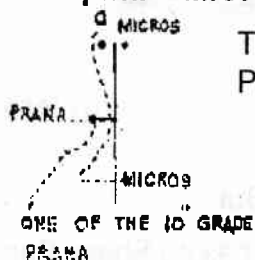

At the bottom of the Tube that comes out as Laddus air is converted into 3 times the quantity of Microbes and thrown to side ways.

This portion is called "Washing Bottle"

These Microbes are filled up in side ways.

2-15 p.m. " MICROBES "

Oct 3" 21. M.

The Prana side waves become to a limit is a Prana level of 10.

In this 10" level if taken one as Micro and it branches out many Micros.

A view comes to this as from one Prana came to a micros grade another view is to see is there a level to become as plenty in Prana level.

The latter thought came to it and this was thrown out by the other micros pressure of filling up nature.

Oct 4" 21. Tue.

Further will be given in Prana level instructions.

M. Venca

6-45 p.m.

6-45 p.m.

Continued subject from pp 163. (i.e. 30-9-1921 Fri).

By this washing Bottle the space will be increased and filled up.

6-50 p.m. about the Prana level

Prana side whole is to take as a border from starting to end prolong.

The border itself is of Pressures Prana, while Prana stagnant in all sides become, it keeps this side as pressures border from top to end prolong.

So this side is in pressure added up. These pressures became stagnant without any Calculation of period.

In this stagnant pressure Prana

7" p.m.

Oct 14 21 Fr.

without no calculation of period.

To this no breadth calculation could be given by anybody, in any direction. This unlimited stagnant was in unlimited period.

Within it the ebbing pressure alone is working.

"Ebbing" – receiving the stagnant grade.

A small one is receiving the larger within itself is called Ebbing, at once the pressure become as stagnant.

By this ebbing pressure it is acted to all sides goes and stands stagnant. By this ebbing pressure the Pressures Prana border is formed.

7-20 p.m

(Only by this line of work the present Earth could be taken to this Prana level through the stability made routes to travel as a molecule to its enlarged border).

By this ebbing pressure the stagnant pressures border and by its waves a Micro in the starting side, a view came to it.

In the stagnant portion after the border is formed this view came to the Micro in the middle of the border line – as it is extending to unlimited length.

This Micro thinks its original place itself is stagnant one and

7-50 p.m.

after Coming out too is stagnant place why that it could not stand in the original place.

It was not thrown out by bidding and by the lenience it came out to the stagnant's pressure.

Each stagnant place could be taken as an Independent place.

So this Micro thinks to stand as an Independent stagnant in the original place instead of remaining stagnant in this border as stagnant ones.

To this border extending alone is given and not receiving to the Ebbing level.

8-40 p.m.

Wherever we go it is stagnant level, even in ebbing level too.

There is no way to go to the ebbing original.

So it tries to reach the middle point where the first ebbing began.

8" p.m.

Oct 24" 21.M.

From the ebbing point the stagnant pressure reached a certain distance on the starting side where a view came to the Micro.
